## **DETAILED ACTION**

## Election/Restrictions

This application contains claims directed to more than one species of the generic invention. 1. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species A. claims 1-30, drawn to diffractive modulating element having a first zone plate and second reflective zone plate that is complementary to the first zone plate,

Species B. claims 31-47, drawn to an achromatic diffractive modulating element having first and second zone plates and having a reference surface, deflecting surface and compensating surface.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

- 2. The claims are deemed to correspond to the species listed above in the following manner:
  - Claims 1-30 reads on the species A and claims 31-47 reads on the species B.

The following claim(s) are generic: no claims are generic.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 3. because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for

Art Unit: 2872

the following reasons: Species A discloses modulation based on diffractive element wherein the diffraction is based on the separation between the first and second zone plates. Species B recites an achromatic diffractive modulating element based on the separations between reference surface, deflecting surface and compensating surface on the first and second zone plates. The species B requires it to be achromatic, which means light of different wavelengths are compensating each other.

4. A telephone call was not made to applicant's attorney to request an oral election to the above restriction requirement, due to the complication of the election requirement.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Audrey Y. Chang whose telephone number is 571-272-2309. The examiner can normally be reached on Monday-Friday (8:00-4:30), alternative Mondays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Drew Dunn can be reached on 571-272-2312. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
